HRT Patient Information

Hormones in synergy

Balancing multiple hormones across multiple pathways can result in a much higher level of health and wellness,

Estrogen

Benefits: protect against coronary heart disease, lower LDL and raise HDL, prevent bone loss after menopause, helps prevent tooth loss, plumps out skin adding moisture and collagen to prevent wrinkles, smoothes and firms the skin, maintains vaginal secretions, preventing and reversing dryness, and can reverse male pattern hair growth on the face and body, restores a clarity of thinking and serenity

Dose: Starting 0.3mg E2 is as good as Biest 1.25mg to normalize blood lipids

Progesterone

Promotes lipolysis, increased energy from fat loss, protection from endometrial and breast cancer, improves mood and sexual function, and normalizes blood sugar, zinc, and copper levels, increased bone density, etc.

Dose: not stated but will vary from patient to patient in balancing

Testosterone

Benefits: strong growth hormone stimulant, protects against atherosclerosis, decreased risk factors in heart attack, renews strength, improved balance, raised red blood cell count, increased libido, increased ability to maintain erection, not improvement in impotence, lower LDL, and cholesterol, saves bone and prevent osteoporosis, improved autoimmune functions, decreased immune function, heightens mood and sense of well being, increases some mental functions i.e. visual spatial ability. Too much testosterone may cause a males refractory period to exceed 10 minutes which will cause problems long term.

Dose: 3 month trial, check PSA levels 2 x yearly in addition to digital rectal exam to protect from benign prostatic hyperplasia or undetected cancer promotion, and 3 yearly ultrasounds. Possible testicular atrophy, high red blood cell and hematocrit counts, depression, fluid retention, reduced sperm count and volume of semen, reduced HDL cholesterol. Best way to maintain normal testosterone levels is with vigorous exercise, treadmill and weight training.

DHEA

Benefits: anti-obesity, anti-diabetes, anti-cancer, anti-autoimmune disease, anti-heart disease, anti-stress, anti-infectious disease, with life extending effects. Blocks the effects of G6PD by enzyme inhibition. G6PD is used by the body to store and produce fat. Balance with testosterone

Dose: DHEA 5-150mg 6 of 7 days a week, w/ DHEA precursor on off days balanced with testosterone. Women only need 5 to 10mg every day and should also be balanced with testosterone. There may be increased benefits in using divided dosing. DHEA should be used in combination with antioxidants.

HRT Patient Information

Melatonin

Benefits: Tryptophan converts to serotonin which can then convert to melatonin. Melatonin is a potent anti-oxidant, immune booster, cancer fighter, heart helper, mood elevator, sleep promoter w/reduced time to fall asleep, increased actual sleep time, reduced number of awakenings, and increased quality of sleep reflected by deep or slow wave sleep, improved jet lag symptoms by at least 50%. Melatonin is capable of functioning as an anti-oxidant both inside and outside the cell.

Dose: Supplementation should start after age 45. Start with 200mcg to 0.6mg of Melatonin daily, most people 0.5 to 1mg at bedtime is enough, if groggy in morning decrease dose by 0.5mg every day until symptoms resolve. Take ½ to 1 hour before sleep. If trouble-sleeping increase dose up to 3mg and to 10mg in nuclear attack. Decrease dose gradually so as to avoid rebound insomnia. Higher doses may cause mild headache, upset stomach, decreased sex drive, and depressed feelings. Caution not for use in pregnant or nursing mothers, children, women trying to conceive (high doses act as a contraceptive), pt on Rx steroids, or with mental illness, depression, severe allergies, autoimmune diseases (i.e. multiple sclerosis), or immune system cancers (i.e. leukemia, lymphoma) It is best used with the amino acid tryptophan to balance the pathway.

Thyroid

Benefits prevents symptoms of deficiency i.e. increased susceptibility to colds, viruses, and respiratory ailments, heavy labored breathing, muscle cramps, persistent low back pain, bruising easily, mental sluggishness, emotional instability with crying jags and mood swings, temper tantrums, getting cold easily, particularly in the hands and feet, dry coarse, leathery or pale skin, coarse hair or loss of hair, loss of appetite, stiff joints, and atherosclerosis, potentially 15% of over 60 population have sub clinical hypothyroidism.. Do Barnes basal temperature test if AM temp below 97.8 to 98.2 degrees for 2 consecutive days you are likely hypothyroid. Always try iodine first as this mineral deficiency will cause low thyroid. It should be taken with selenium, zinc, copper and the amino acid tyrosine to assure all pathways are functioning with proper nutrition.

Before starting any hormone regime please, consult your medical practitioner first, for recommendations.
